**The colour production is not binding!**

We point out, that there will be general tolerances of the placement up to +/- 3 mm in each directions.  
Further with more colour prints it's possible to have register tolerances up to +/- 0,2 mm per colour.  
Small parts, screen and text could be closed or could break down.  
Small colour differences and white blinks as well we cannot exclude.  
These properties are not fault and do not justify a complaint.
